

QCustomPlot::deselectAll

QCustomPlot::mouseRelease
Event

QCPLayerable::deselectEvent

```
graph LR; A[QCustomPlot::deselectAll] --> C[QCPLayerable::deselectEvent]; B[QCustomPlot::mouseReleaseEvent] --> C;
```

The diagram illustrates two calls to the `deselectEvent` method of the `QCPLayerable` class. On the left, two boxes represent the calling methods: `QCustomPlot::deselectAll` (top) and `QCustomPlot::mouseReleaseEvent` (bottom). Arrows from the right side of these boxes point to a single box on the right, `QCPLayerable::deselectEvent`, which is shaded gray. This indicates that both `deselectAll` and `mouseReleaseEvent` invoke `deselectEvent` on the layerable objects.
